Headquartered in Houston, Texas, Bob Johnson & Associates, Inc. is a full-service water treatment company with over 30 years of experience in providing complete treatment systems to commercial and industrial customers. The Company builds and installs a wide range of products and carries a large, standing inventory of parts. Our product lines are selected specifically to provide our customers with the latest in modern water science and water technology. We design and build our water treatment systems, in house, so we know we are building in the reliability you need for performance, in the field, every day.

Filtration  
Water Softening  
Distillation  
Reverse Osmosis  
Degasification  
Dealkalization  
UV Sterilization  
Boiler Feed Water  
Wastewater  
Desalination  
Chlorination  
Ultrapure Water  
Potable Water

## PRODUCTS WE PROVIDE

Survival in today's high tech world requires that you stay up-to-the-minute on the latest technology in the water treatment industry. We work daily with our vendors and suppliers to insure that we have available, for our customers, the most efficient and reliable water treatment products on the market. As a full-service, independent supplier, we are free to pick whichever manufacturer offers the best value and the most reliable performance from its products.

Then we combine this OEM equipment into our overall system design. We engineer the piping, we design the controls, we specify the tanks & pumps and we lay out the entire system footprint. We do the installation and start-up ourselves. We provide our own warranty and we enforce the OEM warranty when required. And we are there to work with you for after-the-sale service and to provide service maintenance when required.

When you select a Bob Johnson product, you can be sure you are getting a piece of equipment produced by a proven manufacturer, installed and commissioned by a trusted 30-year old company, and supported by a large field service staff...all working to make sure your water treatment system performs according to your specific needs.

# PRODUCTS

## WATER SOFTENERS

We engineer, design and build water softeners ranging in size from small commercial units to extremely large industrial twin and triple tank, PLC-controlled softener systems. For standard installations, we use Unity brand softeners because they have proven design features and the reliability that our customers demand. In addition, when required, we are free to utilize other OEM's water softeners to provide exactly what our Customer specifies.

## REVERSE OSMOSIS

We produce RO units for point-or-use service and for large industrial customers. Our design experience, coupled with engineering from our primary RO vendor, ITT/WET, enables us to select the exact equipment for our customers, based on their incoming raw water supply and their product water requirements. And we know that our responsibility goes beyond installation. We will be around to provide maintenance or on-going service you need for your RO systems.

## ALL TYPES OF FILTRATION SYSTEMS

We have the system design experience to properly select the type of filters you need. We work daily with national filter manufacturers who produce cartridge filters, activated carbon filters, multi-media filters, sand filters and large industrial, self-cleaning, filter systems. We understand both the costs and the benefits of implementing each type of filter system so that our design lowers your system operating costs.

## BOILERS and WATER HEATERS

We provide boilers for commercial installations and for large industrial plants. We provide units from some of the largest boiler and water heater OEM's in the world, including Teledyne Laars and Ellis. We do the installations and we do on-call boiler and water heater service...and that's what really counts when you need reliable hot water.

Our complete line of products include many other systems and individual products manufactured by the largest OEM's in the water treatment industry. We supply DI, Regeneration, Chlorinators, UV Systems, Salt & Resin, Ozonators, Dealkalizers, Desalination Units, Chemical Feed Pumps, Ultrapure Water Systems and an entire range of other water treatment products. When you need quality, you need Bob J. Johnson & Associates to specify, select & design your product.
